DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 13 and 14 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims are indefinite for failing to particularly point out and distinctly claim the subject matter. The claims recite a method for clathrating a compound. However, the claims do not specific set forth any process limitations. The process or method is not set forth and not clear as to how one of ordinary skill in the art is to clathrate the compound recited.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claim Rejections - 35 USC § 102

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and

Art Unit: 1792

the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1, 3, 4, 6, 15 and 16 are rejected under 35 U.S.C. 102(a) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Hosono et al (2002-003218 and 2003238149).

The Hosono et al references teach a mixed crystal compound, note entire references. The mixed crystal is $12\text{CaO} \cdot 7\text{Al}_2\text{O}_3$. The compound is treated to create an active oxygen with a content of 10^{18} /cm³ or more, note translated abs. The references do not set forth the conductivity and ratio of oxygen in cages to free. However, the properties would inherently be similar since the treatment is similar in nature. Further, it would have been obvious to one of ordinary skill in the art to modify the Hosono et al references to create the claimed properties in order to increase oxidation at lower temperatures increasing the use of the compound as a catalyst or antibacterial material.

Claims 2 and 5 are rejected under 35 U.S.C. 103(a) as obvious over Hosono et al (2002-003218 and 2003238149) both in view of Yamaguchi et al (comm.. of the American Ceramic Society).

The Hosono et al references are relied on for the same reasons as stated, supra, and differs from the instant claims in the specific compound. However, the Yamaguchi et al reference teaches $12\text{SrO}:7\text{Al}_2\text{O}_3$ and that it is treated by the same means as $12\text{CaO}:7\text{Al}_2\text{O}_3$, note page c-36. It would have been obvious to one of ordinary skill in the art to modify both the Hosono et al references by the teachings of the Yamaguchi et al reference to use $12\text{SrO}:7\text{Al}_2\text{O}_3$ in order to increase the use of the compound.
